This spring, *AI Magazine* launched its digital edition, which brought the magazine new interactivity and color throughout. I’m delighted to announce that this issue inaugurates another major delivery advance, the launch of the *AI Magazine* app. The app delivers access to the magazine in a device-tailored form for the iPhone, iPad, Android smartphone, Android tablet, or Amazon Kindle Fire. In addition to providing easy interaction with the magazine’s content, the app contains a library of issues (including all of 2013), which will enable reading the magazine anywhere, even offline in airplane mode. It supports searching within and across issues, saving content, and sharing by email or social media. Push notifications will inform users of new issues, and an RSS feed (coming soon) will inform readers of AAAI announcements. The app is free to AAAI members, and is available on iTunes, Apple Newsstand, Google Play, and the Amazon Appstore.

The vision for the app and its development have depended on Mike Hamilton, of AAAI, and I would like to thank him for the outstanding work which brought both launched this initiative and brought it to fruition.

Of course, the heart of *AI Magazine* remains its content. I encourage readers to submit articles on key AI areas, trends, opportunities and applications, as well as to submit proposals for timely special issues. I hope the new capabilities and convenience of the *AI Magazine* app will make it even easier to enjoy the magazine’s fine articles covering the breadth of AI.
