

Winter Calendar of AI Events

January 2006

JANUARY 4-6

Ninth International Symposium on Artificial Intelligence and Mathematics. Fort Lauderdale, FL USA

■ **Sponsors:**

Annals of Math and AI, Florida
Atlantic University

■ **Contact:**

Shlomo Zilberstein
University of Massachusetts, Computer
Science, 140 Governor's Drive,
Amherst, MA 01003 USA
Voice: 413-545-4189
Fax: 413-545-1249

February 2006

FEBRUARY 13-16

Artificial Intelligence and Applications. Innsbruck, Austria

■ **Sponsors:**

IASTED, Technical Committee on Artificial Intelligence and Expert Systems,
World Modelling and Simulation Forum (WMSF)

■ **Contact:**

The International Association of Science and Technology for Development
#80, 4500 - 16th Avenue N.W.,
Calgary, AB T3B 0M6 Canada
Voice: 403-288-1195

New books from The MIT Press

Wired for Speech

How Voice Activates and Advances the Human-Computer Relationship

Clifford Nass and Scott Brave

"Should a computer refer to itself as 'I'? Questions such as these are philosophical, with implications that range from the social to the psychodynamic. In this dense and fascinating work, they are treated empirically: in a series of systematic investigations, the voice of the machine emerges as a new evocative object for thinking about how people actively draw the line between human and artificial. A compelling contribution to our understanding of computer-human relationships—now and in the years to come." — Sherry Turkle, MIT, author of *The Second Self*

296 pp., 4 illus., \$32.50

Constraint-Based Local Search

Pascal Van Hentenryck and Laurent Michel

"Constraint-Based Local Search presents a powerful new programming language paradigm for combinatorial optimization, uniting the power of local search with the declarativeness of constraint programming. This book will become an important reference for students and practitioners of combinatorial optimization."

— Andrew J. Davenport, IBM TJ. Watson Research Center

472 pp., 102 illus., \$40

now in paperback

Imitation of Life

How Biology Is Inspiring Computing

Nancy Forbes

"An expert guide to the hottest research in a potentially revolutionary area of technology."

— Booklist

176 pp., 46 illus., \$14.95 paper

Probabilistic Robotics

Sebastian Thrun, Wolfram Burgard, and Dieter Fox

"A robot is an uncertainty machine: its perception and decisionmaking capabilities must embed at their core the processes dealing with uncertainty. This book is an essential reference for the student, the teacher, and the researcher to understand the basics and the advanced methods of estimation theory, and the probabilistic models and processes underlying robot localization, SLAM, and decision making. A 'must have' textbook!"

— Raja Chatila, LMS - CNRS, France

Intelligent Robotics and Autonomous Agents Series • 688 pp., \$55

Robotics

Science and Systems I

edited by Sebastian Thrun, Gaurav Sukhatme, and Stefan Schaal

Contains papers presented at the inaugural conference of Robotics: Science and Systems. Brings together researchers working on the algorithmic and mathematical foundations of robotics, robotics applications, and analysis of robotics systems.

700 pp., \$75 paper

Reasoning about Uncertainty

Joseph Y. Halpern

Examines formal ways of representing uncertainty and considers various logics for reasoning about it. The material is accessible and relevant to researchers and students in many fields, including computer science, artificial intelligence, economics (particularly game theory), mathematics, philosophy, and statistics.

456 pp., 12 illus., \$27.50 paper
